CTR Tubing Rotator

E-PLUS Tubing Rotator

CDHS Tubing Swivel

2-Way Tubing Swivel

Evolution Oil Tools has a complete selection of Artificial Lift Tools and accessories

SC-1 Anchor Catcher

Beam Gas Separator

PC Gas Separator

Basic No Turn Tool

Halbrite No Turn Tool

Tubing Centralizer

CRTA Rotating Anchor

Torque Anchors

The major component of the Artificial Lift Tools product is our range of Torque Anchors. All of our Torque Anchors provide your with a simple, economical and reliable solution to prevent tubing back off when PC pumping.

Depending on the conditions present, we can offer you with our Dynamic Torque Anchor (DTA), Centralizing Torque Anchor (CTA), Halbrite No-Turn Tool or with the simple and rugged Basic No-Turn Tool.

Tubing Rotators

Our Tubing Rotators complement our Torque Anchors in saving you from potential down time and rig expense, as well as reducing maintenance costs. The CTR Tubing Rotator was designed to extend the life of your tubing string by rotating the tubing. This assures that the sucker rods do not wear against only one spot of the tubing, which will cause premature tubing failure. The E Style and E-Plus Tubing Rotators offer the same benefits of the CTR, but with a low profile design feature that helps to keep the overall wellhead height to a minimum.

V-Black SS Screen Pump Intake

Eccentric Intake

Burst Plug Tubing Drain

Tubing Drain Valve

Dynamic Torque Anchor with Extra By-Pass (DTA-XB)

Centralizing Torque Anchor with Extra By-Pass (CTA-XB)

Dynamic Torque Anchor (DTA)

Centralizing Torque Anchor (CTA)

Gas Separators / Intakes

Evolution offers two unique Downhole Gas Separators to significantly increase pump efficiencies and oil production.

PC Pump Gas Separator uses centrifugal forces to separate the gas from the produced liquids before they enter the pump. Liquids are carried through into the pump while the separated gas is forced to flow up the annulus.

Beam Pump Gas Separator is designed to provide a method of allowing gas to migrate up the annulus, thereby preventing gas locking. The unique modular design makes it the most flexible Downhole Gas Separator available on the market.

We also offer a **Bottom Feeder Weighted Eccentric Intake** and a **V-Backed Stainless Steel Pump Intake** as well.
